

**Network Publication Of Data
Synchronized With Television Broadcasts**

ABSTRACT

Distribution of ATVEF type broadcasts over a network. Generally, an ATVEF receiving site receives ATVEF data that is published along with a television or other broadcast.

The ATVEF receiving site then transcodes the ATVEF data into a second format for distribution across a network. A viewer may then receive the ATVEF data with an appropriate receiver according to the second format. For example, ATVEF data may be received by the ATVEF receiver, transcoded into content made available by to a web browser, and then received on a wireless Internet browser used by a viewer.
